Tenure – May, 2016 – Till Date
Designation – Senior Software Engineer

Previous Employer - Agreeya Solutions (India) Pvt. Ltd.
Tenure – August, 2013 – March, 2016
Designation – Associate Software Engineer

PROJECT DETAILS

Project 1
Name: Affidavit Management System (AMS)
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: React Js, Redux and JavaScript (ES6)

Description: Affidavit management system (AMS) is an application that supports validation, authentication and generation of affidavits sent by the legal firms to the court in order to collect money from different users(debtors). With the help of this application law firms take defaulter accounts to the court in order to sue the users but to make the whole process transparent and clear, the law firms used affidavits generated through this system while taking the accounts to the court.

Project 2

Name: Everest
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: React Js, Redux, JavaScript (ES6)

Description: Encore purchases the portfolio from banks and import accounts in DM, then Encore makes calls to debtors and ask them to repay their debt, Encore offer discounts and loan payment in easy instalments. However there are some users who do not agree to repay their debt, in those cases Encore file litigation, during litigation Encore requires different documents, then Everest come into picture as Everest manages all media related to an account, this is required by different applications such as Cogent, DM to further process the litigation process. In Everest the users first ingest document into system, then extract the data as per tag associated on the documents and put all the data in Mongo DB. Once all data exist in the system then user Search documents, create bundle of document and download documents which are used for litigation process.

Project 3

Name: Authorization Application
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: React Js, Redux, JavaScript (ES6)

Description: It's a system to authorize, authenticate the user login credentials and assigned some roles to a particular user. When a user login to MCM applications then user is able to do only operation in authorized applications which are applicable under user's role.

Project 4

Name: Revinsight - Revenue & Accretion system
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: React Js, Redux, JavaScript (ES6)

Description: The existing R2K Collection platform and R2K Accretion system is originally designed as an integrated system for tracking consumers and pool level amortization for the domestic business. "Pool group" level is later implemented – but is unable to accommodate expanding data structural changes. Pool data based on external collection platforms along with foreign currencies is also not designed as part of this legacy integrated system.

The lack of quarterly reforecast capabilities, which is used for amortization in the current R2K, introduces to the development of "outside tools" to overcome these limitations. Domestic Analysts (Portfolio Analyst, Forecast Analyst, and Revenue Analyst) basically utilize R2K collection information and process them externally with SAS before those results are integrated into Microsoft Excel modeling and Microsoft Access for database and data manipulation. The complexity of this process begins to grow when R2K is not able to handle foreign currencies, requiring the monthly and quarterly forecast processes to be done manually. Given the current system deficiencies and lack of capabilities, the business recognizes the need to build a new web based scalable solution which can overcome all these limitations.

Project 5

Name: MS CRM Development and support.
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: Microsoft Visual Studio 2012, C#, MS Dynamics CRM 2015, JavaScript, XRM.

Project 6

Name: SkySlope - Real Estate Transaction Management System.
Company: Agreeya Solutions (India) Pvt. Ltd
Environment: Microsoft Visual Studio 2012, ASP.NET, C#, SQL SERVER Management Studio, SVN, WCF, JavaScript, JQuery
Description: SkySlope is a transaction management software designed for real estate brokers and agents. It is specifically built to help users close out their transactions by neatly organizing their documents and ensuring compliance to real estate laws.
